Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Follow Up Flag: Follow up
Flag Status: Flagged

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Gladys Delgadillo

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Grace Mason

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Lathie Fierro

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Rochelle Phillips

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I demand that you adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health. Many of us are already suffering from different kinds of lung ailments, including children, which cannot be ignored.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible. This should have been done a long time ago. I'm demanding that you act responsibly already. Thank you.

Sincerely,
Sara Hayes Hayes

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Julie Ries

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,

It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Bob Wandle

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
bruce bryan

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Penelope Ward

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Mary Colvin

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Furthermore, we need to actually ENFORCE the existing rules that are on the books. Los Angeles has not regularly inspected drilling sites and has not ensured that operations are compliant with current laws throughout the city. Simply insisting that current rules are followed will significantly improve air-quality and safety throughout the region. Please insist that this be done as part of this relatively minor additional requirement.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Sofia Ratcovich

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

Here we are, stated not by a radical environmentalist, but from the Head of the United Nations:
"Humanity is waging war on nature. This is suicidal. Nature always strikes back -- and it is already doing so with growing force and fury. [...] Let's be clear: human activities are at the root of our descent towards chaos. But that means human action can help solve it. Making peace with nature is the defining task of the 21st century. It must be the top, top priority for everyone, everywhere. [...] But there is no vaccine for the planet. Nature needs a bailout. [...] This is an epic policy test. But ultimately this is a moral test. It is time to flick the "green switch". We have a chance to not simply reset the world economy but to transform it.

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Emily Morales

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Timothy Lawnicki

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Vivian Woolfson

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

Please forward this to whom it may concern. Yesterday, the pollution coming from the Chevron in the bay cities was unacceptable. We can't be breathing in this pollution as it is known to cause cancer, asthma, and other serious health problems. There is no reason for some of the wealthiest cities that are the most progressive to be dealing with this pollution. If we must expect people to ride bikes in order to end this blatant disregard for life by the Chevron station, then we need to start choosing gas free options. If you take away the Chevron station, then we will be forced to live better healthier lives. It looked like the world was ending yesterday for hours. We already have tons of fires, natural, and manmade disasters polluting our Earth. While a lot of that pollution happens elsewhere and we have less control, this city is our city. The people of Los Angeles are progressives who embrace the ideas of healthier, cleaner, more efficient, natural lifestyles. Use your eyes to plan new breakthrough ways to increase tourism profits, while also cleaning the environment. You are barking up the right tree here in LA! Please, stop us from being hypocrites and actually help us live the clean lifestyles that we in Los Angeles claim to have. Help us get rid of that eyesore/ void of life Chevron refinery! Thank you!
*****I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Joy Fox

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Rita Davenport

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

As a Professor Emeritus of Zoology and Environmental Science, and a resident of the Los Angeles area, I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences. I know this from personal experience as I have asthma myself!

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Thank you for your attention to my comments!

Sincerely,
Glenn Stewart

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
I-Ching Lao

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Kikei Wong

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Elizabeth Gann

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1.

Along with the recent passing of the Indirect Source Rule (thank you so much for that!) it's another step in the right direction making Los Angeles air more breathable.

As I know you're well aware, Southern California has the worst ground-level ozone pollution in the nation. This has led to asthma, diminished lung function and premature death, as well as many other associated social and personal costs.

Refinery Rule 1109.1 would require refineries to finally install controls on equipment such as large boilers and heaters, which they have so far resisted.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Thank you for your leadership on this matter.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Sami Taylor

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

Polluters have been legally allowed to kill us all and this must end now.

Governments have allowed profiting to rule the day and lives of all, including the health of our planet and all who share it with us...to not end this now is a death sentence to all as it already has been for billions of beings.

Let Los Angeles be a leader and a role model for all the other cities in the world, that we care and we do what is right while still making profits...profits that have earned the right to profit.

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
MARIA TERESA FERRERO

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Mary Ellen

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
KURT CRUGER

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Christine Hsia

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Margaret Starbuck

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Don Bush

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
sharon byers

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

Like many life long Angelenos, I benefit from forward-thinking air pollution regulations that curtailed out-of-control emissions in the 60s and 70s. Yet, there is so much more work to be done. In recent years, our air pollution has worsened, and it is up to us to make things better now and for the next generation. We also need to work more on sources of localized air pollution that severely affect communities near emissions sources.

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Daniel Walter

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Julio Ruben Terveen Terveen

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
MELINA PARIS

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Cybelle Sato

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
S Abrams

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Irene Ryu

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Catherine Quinlog

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Robert Herbst

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Birgitta Martinez

These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Achilles Aiken

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Theodore Bergmann

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Thomas Fitzgerald

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Rebecca Wang

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

The continued preventable pollution from refineries and pipelines boggles my mind, considering the incredible profits of the energy industry and the industrial dominance in our country.

Make it stop already! The industry with the privilege of providing energy, must do everything it can to mitigate negative externalities.

It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

The board should also endorse carbon pricing, with steady increases and money back to households, to make a difference in emissions over time.

Sincerely,
Elizabeth Fenner

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Kathy Popoff

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I am a resident of West Hollywood and work as a healthcare provider for underserved communities in South Los Angeles. It is time to put the health of all Southern California residents above industry convenience. You have the chance to do this for the citizens of this state.

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
ML Heller

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 as an interim step in improving air-quality standards and protecting public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution and need to be phased out completely if our planet and our children are to survive.

In the meantime, state law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
MARK V SHELDON

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
ken parsons

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Emily Longo

Re: Proposed Rule 1109.1 (Refinery Equipment) – SUPPORT

Dear Governing Board Members:

We submit this letter in support of Refinery Rule 1109.1, which would bring our region closer to meeting air quality standards to protect public health.

Our region continues to have the worst ground-level ozone pollution in the nation. This pollution threatens the health of residents in the region with a range of harms, including asthma, diminished lung function, and premature death. These harms, in turn, cause negative socio-economic impacts, such as increased health care costs, missed workdays, and school absences.

Petroleum refineries are a major source of ozone-causing pollution. For decades, refineries have avoided installing available life-saving pollution controls on hundreds of pieces of equipment, such as large boilers and heaters. As a result, refineries have saved millions of dollars. Refinery Rule 1109.1 would require refineries to finally install available controls on equipment that will improve public health and create jobs.

We encourage you to adopt a strong Refinery Rule 1109.1 that secures the maximum amount of emissions reductions at petroleum refineries as quickly as possible. Refineries have had five years to install these pollution controls but have delayed making these necessary investments and are currently lobbying to keep delaying indefinitely. Communities living near refineries have waited for far too long and cannot afford to wait any longer.

Sincerely,

Ernie Avila

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Joanna Carroll

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
BJ Lee

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Albert Valencia

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Dominic Estrada

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Phyllis Chavez

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Carlos Echevarria

These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Sylvie Delisle

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays, and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Paige Gulley

August 27, 2021

South Coast Air Quality Management District
Attn: Cindy Bustillos, Governing Board Liaison (cbustillos@aqmd.gov)
21865 Copley Drive
Diamond Bar, California 91765

This letter accompanies the names of 1,213 individuals who have submitted public comments urging the South Coast Air Quality Management District to pass a strong Refinery Rule.

Re: Proposed Rule 1109.1 (Refinery Equipment) – SUPPORT

Dear Governing Board Members:

We submit this letter in support of Refinery Rule 1109.1, which would bring our region closer to meeting air quality standards to protect public health.

Our region continues to have the worst ground-level ozone pollution in the nation. This pollution threatens the health of residents in the region with a range of harms, including asthma, diminished lung function, and premature death. These harms, in turn, cause negative socio-economic impacts, such as increased health care costs, missed workdays, and school absences.

Petroleum refineries are a major source of ozone-causing pollution. For decades, refineries have avoided installing available life-saving pollution controls on hundreds of pieces of equipment, such as large boilers and heaters. As a result, refineries have saved millions of dollars. Refinery Rule 1109.1 would require refineries to finally install available controls on equipment that will improve public health and create jobs.

We encourage you to adopt a strong Refinery Rule 1109.1 that secures the maximum amount of emissions reductions at petroleum refineries as quickly as possible. Refineries have had five years to install these pollution controls but have delayed making these necessary investments and are currently lobbying to keep delaying indefinitely. Communities living near refineries have waited for far too long and cannot afford to wait any longer.

Sincerely,

The Undersigned

BEFORE PARTIAL JUDICIAL NOTICE

Supporter Name	Supporter State/Province	Supporter City	Message Text
Sedaghat, Houman	CA	Los Angeles	I submit this letter in support of Refinery Rule 1109.1, which would bring our region closer to meeting air quality standards to protect public health. The public deserves better air quality than what they're breathing anywhere around oil refineries. Therefore, I submit this letter in support of Refinery Rule 1109.1, which would bring our region closer to meeting air quality standards to protect public health. Disturbingly, this region continues to have the worst ground-level ozone pollution in the nation. This pollution threatens the health of residents in the region with a range of harms, including asthma, diminished lung function, and premature death. These harms, in turn, cause negative socio-economic impacts, such as increased health care costs, missed workdays, and school absences. Petroleum refineries are a major source of ozone-causing pollution. For decades, refineries have unacceptably avoided installing available life-saving pollution controls on hundreds of pieces of equipment, such as large boilers and heaters. As a result, refineries have saved millions of dollars at the expense of public well-being. Refinery Rule 1109.1 would require refineries to finally install available controls on equipment that will improve public health and create jobs. I most strongly encourage you to adopt a strong Refinery Rule 1109.1 that secures the maximum amount of emissions reductions at petroleum refineries as quickly as possible. Refineries have had five years to install these pollution controls but have delayed making these necessary investments and are currently lobbying to keep delaying indefinitely. Communities living near refineries have waited for far too long and cannot afford to wait any longer.
Harkins, Lynne	CA	Long Beach	I submit this letter in support of Refinery Rule 1109.1, which would bring our region closer to meeting air quality standards to protect public health. Our region continues to have the worst ground-level ozone pollution in the nation. This pollution threatens the health of residents in the region with a range of harms, including asthma, diminished lung function, and premature death. These harms, in turn, cause negative socio-economic impacts, such as increased health care costs, missed workdays, and school absences. Petroleum refineries are a major source of ozone-causing pollution. For decades, refineries have avoided installing available life-saving pollution controls on hundreds of pieces of equipment, such as large boilers and heaters. As a result, refineries have saved millions of dollars. Refinery Rule 1109.1 would require refineries to finally install available controls on equipment that will improve public health and create jobs. I encourage you to adopt a strong Refinery Rule 1109.1 that secures the maximum amount of emissions reductions at petroleum refineries as quickly as possible. Refineries have had five years to install these pollution controls but have delayed making these necessary investments and are currently lobbying to keep delaying indefinitely. Communities living near refineries have waited for far too long and cannot afford to wait any longer. Please take action before it's too late.
Via, Elizabeth	CA	Jamul	I submit this letter in support of Refinery Rule 1109.1, which would bring our region closer to meeting air quality standards to protect public health. Our region continues to have the worst ground-level ozone pollution in the nation. This pollution threatens the health of residents in the region with a range of harms, including asthma, diminished lung function, and premature death. These harms, in turn, cause negative socio-economic impacts, such as increased health care costs, missed workdays, and school absences. Petroleum refineries are a major source of ozone-causing pollution. For decades, refineries have avoided installing available life-saving pollution controls on hundreds of pieces of equipment, such as large boilers and heaters. As a result, refineries have saved millions of dollars. Refinery Rule 1109.1 would require refineries to finally install available controls on equipment that will improve public health and create jobs. I encourage you to adopt a strong Refinery Rule 1109.1 that secures the maximum amount of emissions reductions at petroleum refineries as quickly as possible. Refineries have had five years to install these pollution controls but have delayed making these necessary investments and are currently lobbying to keep delaying indefinitely. Communities living near refineries have waited for far too long and cannot afford to wait any longer. The AQMD has been very lax in enforcing even what rules are in place, often overlooking MANY violations by oil refineries in the Harbor area reported by citizens suffering the effects. While we suffocate and gasp for air the AQMD officials sit in their comfortable air-conditioned offices in Diamond Bar, unmotivated to really do what is necessary to clamp down on egregious refinery acts of dumping tons of pollutants on us. I'd like to see AQMD officials forced to live in Wilmington for a year so they can smell the chlorine-laden air and wallow in the benzene and hydrogen sulfide soaked environment, breathing deeply to take in as much toxic air as possible, then tell us all how they feel at the end of the year. Apparently they don't mind little helpless children living in such conditions, with impeded lung function and asthma, as they haven't real done anything effective to stop greedy Big Oil from ravaging our lives.
PROVANZANO, CARLO	CA	Rolling Hills	I submit this letter in support of Refinery Rule 1109.1, which would bring our region closer to meeting air quality standards to protect public health. Our region continues to have the worst ground-level ozone pollution in the nation. This pollution threatens the health of residents in the region with a range of harms, including asthma, diminished lung function, and premature death. These harms, in turn, cause negative socio-economic impacts, such as increased health care costs, missed workdays, and school absences. Petroleum refineries are a major source of ozone-causing pollution. For decades, refineries have avoided installing available life-saving pollution controls on hundreds of pieces of equipment, such as large boilers and heaters. As a result, refineries have saved millions of dollars. Refinery Rule 1109.1 would require refineries to finally install available controls on equipment that will improve public health and create jobs. I encourage you to adopt a strong Refinery Rule 1109.1 that secures the maximum amount of emissions reductions at petroleum refineries as quickly as possible. Refineries have had five years to install these pollution controls but have delayed making these necessary investments and are currently lobbying to keep delaying indefinitely. Communities living near refineries have waited for far too long and cannot afford to wait any longer. Thank you for your time and consideration.
Young, Kristin	CA	Buena Park	As a public health/healthcare professional for 35+ years and an environmental advocate, I submit this letter in support of Refinery Rule 1109.1, which would bring our region closer to meeting air quality standards to protect public health. Our region continues to have the worst ground-level ozone pollution in the nation. This pollution threatens the health of residents in the region with a range of harms, including asthma, diminished lung function, and premature death. These harms, in turn, cause negative socio-economic impacts, such as increased health care costs, missed workdays, and school absences. Petroleum refineries are a major source of ozone-causing pollution. For decades, refineries have avoided installing available life-saving pollution controls on hundreds of pieces of equipment, such as large boilers and heaters. As a result, refineries have saved millions of dollars. Refinery Rule 1109.1 would require refineries to finally install available controls on equipment that will improve public health and create jobs. I encourage you to adopt a strong Refinery Rule 1109.1 that secures the maximum amount of emissions reductions at petroleum refineries as quickly as possible. Refineries have had five years to install these pollution controls but have delayed making these necessary investments and are currently lobbying to keep delaying indefinitely. Communities living near refineries have waited for far too long and cannot afford to wait any longer.
Kingston, Nancy	CA	Mission Viejo	We want CLEAN AIR! I submit this letter in support of Refinery Rule 1109.1, which would bring our region closer to meeting air quality standards to protect public health. Our region continues to have the worst ground-level ozone pollution in the nation. This pollution threatens the health of residents in the region with a range of harms, including asthma, diminished lung function, and premature death. These harms, in turn, cause negative socio-economic impacts, such as increased health care costs, missed workdays, and school absences. Petroleum refineries are a major source of ozone-causing pollution. For decades, refineries have avoided installing available life-saving pollution controls on hundreds of pieces of equipment, such as large boilers and heaters. As a result, refineries have saved millions of dollars. Refinery Rule 1109.1 would require refineries to finally install available controls on equipment that will improve public health and create jobs. Refinery Rule 1109.1 would require refineries to finally install available controls on equipment that will improve public health and create jobs. I encourage you to adopt a strong Refinery Rule 1109.1 that secures the maximum amount of emissions reductions at petroleum refineries as quickly as possible. Refineries have had five years to install these pollution controls but have delayed making these necessary investments and are currently lobbying to keep delaying indefinitely. Communities living near refineries have waited for far too long and cannot afford to wait any longer.</p>
Senser, Ethan	CA	Los Angeles	<p>I submit this letter in support of Refinery Rule 1109.1, which would bring our region closer to meeting air quality standards to protect public health. Our region continues to have the worst ground-level ozone pollution in the nation. This pollution threatens the health of residents in the region with a range of harms, including asthma, diminished lung function, and premature death. These harms, in turn, cause negative socio-economic impacts, such as increased health care costs, missed workdays, and school absences. Petroleum refineries are a major source of ozone-causing pollution. For decades, refineries have avoided installing available life-saving pollution controls on hundreds of pieces of equipment, such as large boilers and heaters. As a result, refineries have saved millions of dollars. Refinery Rule 1109.1 would require refineries to finally install available controls on equipment that will improve public health and create jobs. I encourage you to adopt a strong Refinery Rule 1109.1 that secures the maximum amount of emissions reductions at petroleum refineries as quickly as possible. Refineries have had five years to install these pollution controls but have delayed making these necessary investments and are currently lobbying to keep delaying indefinitely. Communities living near refineries have waited for far too long and cannot afford to wait any longer.</p>

Subject: Adopt Proposed Rule 1109.1 (Refinery Equipment)

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Brian Murphy

Hi there,

My name is Zarah Patriana and I work with the organization Earthjustice. Attached to this email is a .csv file containing the names of **1,213 California residents** who signed on to the letter below in support of Refinery Rule 1109.1.

Re: Proposed Rule 1109.1 (Refinery Equipment) – SUPPORT

Dear Governing Board Members:

We submit this letter in support of Refinery Rule 1109.1, which would bring our region closer to meeting air quality standards to protect public health.

Our region continues to have the worst ground-level ozone pollution in the nation. This pollution threatens the health of residents in the region with a range of harms, including asthma, diminished lung function, and premature death. These harms, in turn, cause negative socio-economic impacts, such as increased health care costs, missed workdays, and school absences.

Petroleum refineries are a major source of ozone-causing pollution. For decades, refineries have avoided installing available life-saving pollution controls on hundreds of pieces of equipment, such as large boilers and heaters. As a result, refineries have saved millions of dollars. Refinery Rule 1109.1 would require refineries to finally install available controls on equipment that will improve public health and create jobs.

We encourage you to adopt a strong Refinery Rule 1109.1 that secures the maximum amount of emissions reductions at petroleum refineries as quickly as possible. Refineries have had five years to install these pollution controls but have delayed making these necessary investments and are currently lobbying to keep delaying indefinitely. Communities living near refineries have waited for far too long and cannot afford to wait any longer.

Dear c/o Clerk of Board South Coast Air Quality Management Governing Board,

I urge you to adopt Refinery Rule 1109.1 to help our region meet air-quality standards and protect public health.

Southern California has the worst ground-level ozone pollution in the nation. It threatens the health of residents with a range of harms, including asthma, diminished lung function and premature death. These harms cause negative socioeconomic impacts such as increased health care costs, missed workdays and school absences.

Petroleum refineries are a major source of ozone pollution. State law requires life-saving pollution control technologies to be installed on large emissions sources. But refineries have avoided making these upgrades to save themselves millions of dollars — and they continue to delay. Refinery Rule 1109.1 would require them to finally install controls on equipment such as large boilers and heaters, which will create jobs as well as improve public health.

Communities living near refineries can't afford to wait any longer. It's time to adopt a strong Refinery Rule 1109.1 to secure maximum emissions reductions at petroleum refineries as quickly as possible.

Sincerely,
Claudine Fairchild
